Preface	V
List of Contributors	XIII
1 Introduction to the Application of Plastics in Vehicle Design	1
1.0 Introduction	1
1.1 Plastics in Lightweight Vehicle Engineering	1
1.2 Plastics Applications for the Exterior	3
1.2.1 Injection Molding with Polymers	4
1.2.2 Textile-reinforced Plastics	5
1.3 Outlook	6
2 Automotive Concepts and Lightweight Design	7
2.1 Increased Use of Plastics in Body Applications: Opportunities and Risks	7
2.1.1 Current Situation of Lightweight Materials	7
2.1.2 Future Regulatory and Market Requirements	9
2.1.3 Lightweight Construction for Rigid Components	12
2.1.4 Use of Plastic as a Structural Material	13
2.1.5 Competition Between Plastic and Stainless Steel	15
2.1.6 Acoustics	16
2.1.7 Summary	16
2.2 Use of Plastics in Body Construction in Future Automobile Design and Production	19
2.2.1 Introduction	19
2.2.2 Structural Plastics	21
2.2.3 The Body Tub Assembly	21
2.2.4 SMC at Ford Motor Company	24
2.2.5 Implications of the End of Life Vehicle Directive	26
2.2.6 Summary	29
2.3 Lightweight Design with Plastics in the New BMW 6 Series	30
2.3.1 Material Mixture Saving Weight and Increasing Collision Safety	30
2.3.2 Requirements for Thermoplastic Side Panels	31
2.3.3 Criteria for the Use of a Thermoplastic Side Panel	31
2.3.4 Material Requirements	33
2.3.5 Product Requirements for Component Design	34
2.3.6 Manufacturing and Assembly Process	36
2.3.7 Outlook and Future Requirements	38

3	Material Concepts and Process Technologies	41
3.1	Plastics Engineering in Automotive Exteriors.....	41
3.1.1	Introduction.....	41
3.1.2	History.....	41
3.1.3	Processing Methods and Applications for Thermoplastics.....	43
3.1.4	Processing Methods and Applications for Polyurethane.....	46
3.1.5	Computer-Aided Engineering (CAE).....	49
3.1.6	Outlook.....	50
3.2	Plastics for the Car of Tomorrow – Invisible Contribution: Visible Success.....	53
3.2.1	Introduction.....	53
3.2.2	Innovation Processes.....	53
3.2.3	Making the “Invisible” Visible: Applying Nanotechnology.....	54
3.2.4	Making the Virtual Real: Applied Simulation Technology.....	56
3.3	CFRP – from Motor Sports to Automotive Series – Challenges and Opportunities Facing Technology Transfer.....	59
3.3.1	Introduction.....	59
3.3.2	CFRP at the Transition Between Motor Sports and Road Cars.....	59
3.3.3	Current Applications of CFRP.....	59
3.3.4	The Trends: a Closer Look.....	61
3.3.5	Challenges.....	61
3.3.6	Opportunities.....	64
3.3.7	Outlook.....	65
3.4	Further Developments in SMC Technology.....	68
3.4.1	Reasons for Using SMC.....	68
3.4.2	The Road to Premium SMC.....	68
3.4.3	Lightweight Potential of SMC Technology.....	70
3.4.4	Outlook for SMC.....	74
3.4.5	Acknowledgements.....	74
3.5	New TPO Grades with Reduced Linear Thermal Expansion for Exterior Parts Painted Offline.....	75
3.5.1	Introduction.....	75
3.5.2	Requirements and Basic Conditions.....	75
3.5.3	Analysis and Simulation Techniques.....	77
3.5.4	New TPO Grades and their Properties Compared with Other Technical Thermoplastics.....	78
3.5.5	Component Test Results.....	80
3.6	Lightweight Bodywork – Use of Structural Foams in Hollow Sections.....	82
3.6.1	Introduction.....	82
3.6.2	Requirements Applicable to Manufacture.....	83
3.6.3	Selection of the Material System.....	84
3.6.4	Process Conditions and Implementation.....	87

3.6.5	Outlook	88
3.7	Body-in-White turns Black	89
3.7.1	Introduction	89
3.7.2	FRP Manufacturing Technologies in the Mercedes-Benz SLR McLaren	90
3.7.3	Prepreg Technologies (Classical and RFI).....	90
3.7.4	Preform Technologies	91
3.7.5	Summary	94
3.7.6	Acknowledgements	94
3.8	Innovative Manufacturing Processes Adapted for the Production of Structural Modules.....	95
3.8.1	Introduction	95
3.8.2	The Evolution of Production Technologies for Structural Parts	95
3.8.3	Developments of New Applications	97
3.8.4	Future Potential of a New Process and Machine Technology	98
3.9	Innovations in Injection Molding for the Automobile of the Future	102
3.9.1	Introduction	102
3.9.2	Innovative Areas for New Process Technologies.....	103
3.9.3	Current Process Innovations in Injection Molding	112
4	Modelling and Rapid Prototyping	123
4.1	Innovative Solutions for Prototype-Making in Automobile Manufacturing – Prototype Component Requirements and Practical Examples.....	123
4.1.1	Passenger Car Development.....	123
4.1.2	Prototype Requirements.....	125
4.1.3	Selection of Suppliers	129
4.1.4	Examples	129
4.1.5	Summary	133
4.2	Rapid Prototyping of Plastic Components for Efficient Vehicle Development	135
4.2.1	Introduction	135
4.2.2	The Importance of Rapid Prototyping	135
4.2.3	Rapid Prototyping – a Definition.....	136
4.2.4	Rapid Prototyping (RP), Rapid Tooling (RT), Rapid Manufacturing (RM): Some Differences	138
4.2.5	The Prototype Assembly Department as Internal RP Service Provider	138
4.2.6	Systems and Applications in the Prototype Assembly Department	140
4.2.7	Outlook	142
4.3	Calculating the Fatigue Life of Short-Glass-Fiber-Reinforced Thermoplastics.....	143
4.3.1	Introduction	143
4.3.2	Material Behavior under Cyclic Loading	143
4.3.3	Formulation for Calculated Fatigue Life Estimation.....	145
4.3.4	Examples of Calculation.....	147
4.3.5	Summary and Outlook	151

4.4	Calculated Estimate of Service Life for Components Made of Short-glass-fiber-reinforced Plastics	153
4.4.1	Introduction	153
4.4.2	Initial Situation and Objectives	153
4.4.3	Theoretical Considerations	154
4.4.4	Procedure for Estimating Service Life	158
4.4.5	Experimental Investigations	160
4.4.6	Components and Component Tests	163
4.4.7	Summary and Further Procedure	164
4.4.8	Acknowledgments	165
4.5	Material Data for Imaging Thermoplastic Plastics in Crash Simulation	167
4.5.1	Introduction	167
4.5.2	Input Data for Crash Calculation	167
4.5.3	Representation of Non-Linear Behavior in the Simulation	169
4.5.4	Fiber-Reinforced Thermoplastics	171
4.5.5	Validation of Material Data and Material Models	172
4.5.6	Failure Analysis	172
4.5.7	Outlook	172
5	Joining	173
5.1	Bonded Joints in and on the Vehicle Structure	173
5.1.1	Introduction	173
5.1.2	Assembly Bonding	173
5.1.3	Bonded Joints in and on the Body	175
5.1.4	Testing, Development, Dimensioning	178
5.1.5	Summary and Outlook	180
5.2	Joining Techniques Used for Integrating Fiber Composite Plastic Components in Metallic Body Structures	181
5.2.1	Introduction	181
5.2.2	Lightweight Design Using Body Structures	181
5.2.3	Joining Techniques for Hybrid Aluminum-FRP Designs	182
5.2.4	Study: Audi A2 with FRP Body Components	189
5.2.5	Summary and Outlook	190
5.3	Bonding Automotive Bodies	192
5.3.1	Bonding – Often the Only Feasible Joining Technology	192
5.3.2	New Adhesives for SMC Components Meet Maximum Requirements	195
5.3.3	Chemical Thixotropic Adhesives	197
5.3.4	Summary	197
5.4	Warm Reactive Bonding	198
5.4.1	Headlight Bonding	198
5.4.2	Current Status of the Technology	198

5.4.3	Market Requirements and Wishes	199
5.4.4	Just-in-Time Production Feasible.....	199
5.4.5	Influence on Handling Strength	201
5.4.6	Pump and Application System for Production.....	203
5.4.7	Utilization in Series Production.....	203
6	Case Studies – Design, Production, Performance.....	205
6.1	Structures and Body Panels	205
6.1.1	Case Study 1: Film Technology in Automobile Manufacturing – a Comparison	205
6.1.2	Case Study 2: Hybrid Tailgate: Getting the Best From Thermosetting and Thermoplastic Materials	218
6.1.3	Case Study 3: Experience with On-Line Paintable Plastics on Vehicle Exteriors	227
6.1.4	Case Study 4: Application of Plastic Bodywork Components in a Modern Bus	234
6.1.5	Case Study 5: Cab Body Panels and Parts: from Thermosets To Thermoplastics	243
6.2	Front Modules, Crash Elements, Safety Concepts	253
6.2.1	Case Study 6: Development of a Thermoplastic Lower Bumper Stiffener for Pedestrian Protection.....	253
6.2.2	Case Study 7: Crash Simulation with Plastic Components	264
6.2.3	Case Study 8: SLR Crash Element: from Concept to Volume Production.....	271
6.2.4	Case Study 9: Thermoplastic Crashboxes	280
6.3	Roof Modules, Hardtops	289
6.3.1	Case Study 10: Roof Module: As Exemplified by the New Opel Zafira	289
6.3.2	Case Study 11: The Z4 Hardtop Made of SMC – a Self-Supporting Automotive Part Made of Thermosetting Material in the Context of CARB Legislation.....	299
6.3.3	Case Study 12: Innovative Noise-Optimized Folding Top for the New BMW 6 Series Convertible	306
6.3.4	Case Study 13: Roof Module for Commercial Vehicles Made with SMI Technology.....	312
6.4	Automotive Glazing	327
6.4.1	Case Study 14: Organic Glazing in the Automobile	327
6.4.2	Case Study 15: Polycarbonate Automobile Glazing: Automotive Industry Requirements and Solutions	335
6.4.3	Case Study 16: Plastic Automobile Windows	346
6.5	Acoustics and Aerodynamics	354
6.5.1	Case Study 17: Specific Requirements on Aeroacoustic Development for Convertibles	354
6.5.2	Case Study 18: Automotive – Compression Molding – LWRT Technique for Car Underbody Covers.....	365
6.5.3	Case Study 19: Noise-Reducing Coatings in Buses: the Mercedes-Benz Citaro	369
	Appendix	383
	Subject Index.....	393
