Table of Contents

Preface	XI
List of Abbreviations	XV
I Aim and methods	1
1 General Importance of Polymers and Trends	3
1.1 Relevance of Polymeric Materials	3
1.2 Materials Science Aspects	5
1.3 Molecular and Supramolecular Structures	7
1.3.1 Molecular Structures	7
1.3.2 Supramolecular Structures, Morphology	13
1.4 Polymer Modification	21
1.4.1 Copolymers	22
1.4.2 Polymer Blends	24
1.4.3 Particulate Composites	28
1.4.4 Short Fiber Reinforced Polymers	30
1.4.5 Conclusions	31
2 Methods and Investigation Techniques	35
2.1 Methods of Structure and Morphology Analysis	35
2.1.1 Macroscale Methods	35
2.1.1.1 X-Ray Diffraction Techniques (WAXS, SAXS)	35
2.1.1.2 Other Scattering Techniques	39
2.1.1.3 Spectroscopic Techniques and Thermal Methods	40
2.1.2 Local, Microscopic Methods	49
2.1.2.1 Optical Microscopy (OM)	50
2.1.2.2 Confocal Scanning Optical Microscopy	52
2.1.2.3 Scanning Electron Microscopy (SEM)	52
2.1.2.4 Transmission Electron Microscopy (TEM)	56
2.1.2.5 Atomic Force Microscopy (AFM)	59
2.1.2.6 Comparison of Microscopic Techniques	61
2.2 Methods of Nano- and Micromechanical Analysis	63
2.2.1 Macroscale Methods	63

2.2.1.1	Scattering (Diffraction) Methods	63
2.2.1.2	Interference Optics	64
2.2.1.3	Spectroscopic Techniques (Rheo-Optical Methods).....	64
2.2.1.4	Other Techniques	66
2.2.2	Local (Microscopic) Methods	66
2.2.2.1	Overview.....	66
2.2.2.2	In-Situ Microscopy.....	70
2.3	Mechanical “Micro-Testing”	80
2.3.1	Mechanical Testing of Micro-Sized Specimens	82
2.3.2	Microindentation Tests	84
2.3.2.1	Imaging Method.....	84
2.3.2.2	Basic Aspects of Microindentation: Contact Geometry	85
2.3.2.3	Depth Sensing Measurements	86
II	General mechanisms of deformation and fracture.....	95
3	Deformation Phenomena and Mechanisms	97
3.1	Basic Types of Mechanical Behavior	97
3.2	Influence of Specimen Size	103
3.3	Deformation Mechanisms.....	108
3.4	Molecular Parameters and Mechanisms	110
3.4.1	Molecular Mobility and Entanglements	110
3.4.2	Molecular Micro-Mechanisms.....	115
4	Crazing	119
4.1	The Phenomenon of “Craze”.....	119
4.2	Characteristics of Crazes	121
4.3	Variety of Craze Structures	125
4.4	Craze Initiation	134
4.4.1	Formation of Pre-Crazes	135
4.4.2	Transformation of Pre-Crazes into Fibrillated Crazes	140
4.5	Craze Growth and Fracture	142
4.5.1	Length Growth	142
4.5.2	Thickness Growth.....	143
4.5.3	Craze Fracture	145
4.6	Factors Influencing Craze Initiation and Growth.....	147
4.7	Structure Initiated Crazes.....	153
5	Fracture Phenomena and Mechanisms	159
5.1	Overview	159
5.2	Principles of Brittle Fracture of Polymers	160
5.3	Stress Concentrations at Particles and Voids	165
5.3.1	Soft Particles.....	166

5.3.2	Hard Particles	170
5.3.3	Thermal Stresses	170
5.3.4	Energetic Effects	172
5.3.5	Stress Concentration Effects in Different Particle/ Void Arrangements.....	173
5.3.5.1	Particle/Void Size.....	173
5.3.5.2	Particle/Void Distance	174
5.4	Toughness Enhancing Mechanisms.....	175
5.5	Fracture Surface Analysis and Damage Analysis	178
III	Main groups of polymer materials.....	183
6	Amorphous Polymers.....	185
6.1	Overview	185
6.2	Amorphous Homopolymers	188
6.2.1	Polystyrol (PS)	188
6.2.1.1	Deformation Characteristics.....	188
6.2.1.2	Modification of Crazes	193
6.2.2	Polymethylmethacrylate (PMMA)	196
6.2.3	Polyvinylchloride (PVC)	198
6.2.4	Polycarbonate (PC)	199
6.2.5	Other Amorphous Homopolymers	204
6.3	Copolymers	204
6.3.1	Styrene-Acrylonitrile-Copolymers (SAN)	204
6.3.2	Cyclic Olefin Copolymers (COC).....	205
6.4	Comparison of Crazes.....	209
6.5	Resins, Thermosets.....	211
7	Semicrystalline Polymers.....	215
7.1	Overview	215
7.2	General Deformation Mechanisms.....	218
7.2.1	Brittle Behavior	219
7.2.1.1	Initiation of Brittle Fracture by Morphological Defects	219
7.2.1.2	Brittle Fracture of Low Molecular Weight Materials.....	221
7.2.1.3	Brittle Fracture at Low Temperatures	224
7.2.1.4	Environmental Stress Crazing/Cracking	224
7.2.1.5	Physical Ageing	225
7.2.2	Craze-Like Mechanisms.....	225
7.2.2.1	Crazing at Low Temperatures	225
7.2.2.2	Crazing at Brittle Fracture Above $T_{g,am}$	226
7.2.2.3	Environmental Crazing	228
7.2.2.4	Crazing under Plastic Deformation.....	230
7.2.2.5	Formation of Chevron Patterns	232
7.2.3	Ductile Behavior.....	235
7.2.3.1	Plastic Deformation of Spherulites	235

7.2.3.2	Deformation on the Amorphous/ Lamellar Level.	237
7.2.3.3	Strain Hardening and Self-Reinforcement	242
7.2.4	Deformation of Crystals and Lamellae	242
7.2.5	Self-Reinforcement and High Strength Materials	244
7.2.5.1	Oriented Structures by Melt Processing	244
7.2.5.2	Oriented Structures by Solution(Gel) Spinning	246
7.3	Examples	247
7.3.1	Polyethylenes	247
7.3.1.1	Influence of Molecular Weight.....	247
7.3.1.2	Influence of Chain Architecture: Branching ..	250
7.3.1.3	Influence of Processing	254
7.3.2	Polypropylenes.....	255
7.3.2.1	Influence of Molecular Weight	255
7.3.2.2	Crystalline Modification.....	258
7.3.2.3	Influence of the Deformation Temperature ...	265
7.3.2.4	Additional Effects.....	267
7.3.3	Polyamides	268
7.3.4	Polyurethanes.....	270
7.3.5	Polyethylene Terephthalate (PET)	270
7.3.6	Syndiotactic Polystyrene.....	271
7.3.7	Fluoropolymers: PTFE, PVDF.....	273
7.3.8	Comparison of different polymers	274
8	Polymer Blends	281
8.1	Overview	281
8.2	Thermoplastic/Thermoplastic Blends	284
8.2.1	Blend Formation	284
8.2.2	Morphology.....	284
8.2.3	Micromechanical Properties.....	285
8.2.3.1	Blends of Amorphous Polymers.....	285
8.2.3.2	Blends of Amorphous and Semicrystalline Polymers.....	289
8.2.3.3	Blends of Semicrystalline Polymers	294
8.3	Rubbers and Elastomers	299
8.3.1	Overview	299
8.3.2	Typical Morphology	302
8.3.3	Micromechanical Behavior.....	305
8.4	Inclusion Yielding	309
9	Rubber Toughened Polymers.....	315
9.1	Overview	315
9.2	Morphology.....	317
9.3	Basic Micromechanical Mechanisms.....	320
9.3.1	Survey of Micromechanical Behavior	320
9.3.2	Rubber Particle Volume Content	328
9.3.3	Rubber Particle Modulus.....	331

9.3.4	Grafting Influence (Interfacial Bonding).....	332
9.3.5	Particle Size.....	333
9.3.6	Additional Factors	340
9.4	Disperse Systems.....	342
9.4.1	Disperse Systems with Amorphous Matrix.....	342
9.4.2	Disperse Systems with Semicrystalline Matrix	351
9.5	Rubber Network Systems	360
10	Composites	369
10.1	Overview	369
10.2	Particle-Reinforced Polymer Composites.....	370
10.2.1	Morphology of Particle-Filled Polymers.....	370
10.2.2	Micromechanical Effects	372
10.2.2.1	Composites with a Tough Matrix (PE, PP) .	372
10.2.2.2	Composites with a Stiff Matrix	383
10.2.2.3	Conclusion	384
10.3	Nanoparticle Polymer Composites.....	385
10.3.1	Overview and General Dependences.....	385
10.3.2	Micromechanical Effects in Different Classes of Nanocomposites.....	389
10.3.2.1	Zero-Dimensional Filler Nanoparticles (POSS).....	389
10.3.2.2	One-Dimensional Carbon Nanotubes (CNT).....	390
10.3.2.3	Two-Dimensional Layered Particles	395
10.3.2.4	Three-Dimensional Filler Particles.....	399
10.4	Fiber-Reinforced Polymer Composites	405
10.4.1	Overview	405
10.4.2	General Micromechanical Effects.....	406
11	Nanostructured Polymers	415
11.1	Overview	415
11.2	Block Copolymers	416
11.2.1	Introduction	416
11.2.2	Diversity in Morphologies and Properties.....	417
11.2.3	Micromechanical Behavior of Block Copolymers	424
11.2.4	Functional BCPs and Nanocomposites	436
11.2.5	Microdeformation Behavior in Block Copolymer/ Polystyrene Blends.....	440
11.2.5.1	Blends Containing Macrophase-Separated PS Particles	440
11.2.5.2	Blends with Oriented Layers	441
11.2.5.3	Blends with Droplet Morphologies.....	443
11.2.6	Microhardness vs. Micromechanical Mechanisms ...	446
11.2.7	Mechanism of Chevron Formation.....	449
11.3	Coextruded Multilayered Polymers.....	451
11.3.1	Overview of Microlayered Composites and Coextrusion Technology	451

11.3.2	Structure-Property Correlations in Multilayered Composites Comprising Amorphous Polymers	457
11.3.3	Multilayered Crystalline/Amorphous Polymer Combinations	468
11.3.4	Multilayered Crystalline/Crystalline Polymer Combinations	475
11.4	Nanofibers	477
11.4.1	Overview	477
11.4.2	Electrostatic Spinning (Electrospinning)	478
11.4.3	Typical Fiber Structures	479
11.4.3.1	Fibers with Porous Structures	479
11.4.3.2	Fibers with Beads and Ribbon-Like Structures	480
11.4.3.3	Fibers with Helical and Twisted Structures	481
11.4.3.4	Fibers with Rough Surfaces	482
11.4.3.5	Fibers with Core Sheath Structures	483
11.4.4	Mechanical Properties of Polystyrene (PS) Nanofibers	484
11.4.5	Nanofibers - Nanocomposites	488
11.5	Conclusions	489
12	Special Forms and Applications	501
12.1	Overview, Special Forms	501
12.2	Hot Compacted Oriented Films/Fibers	503
12.2.1	Overview	503
12.2.2	Hot Compacted Oriented Fibers	505
12.2.3	Hot Compacted Oriented Films	509
12.2.4	Conclusions	512
12.3	Biomedical Polymers	512
12.3.1	UHMWPE	514
12.3.1.1	Morphology and Properties of UHMWPE	514
12.3.1.2	Application of UHMWPE in Hips and Knee Joints	519
12.3.2	Polymethylmethacrylate (PMMA)	526
12.3.3	Bioresorbable Polymers	529
12.3.4	Bone Substitutes	532
12.3.5	Electrospun Nanofibers	535
12.3.5.1	Nanofibrous Scaffolds for Tissue Engineering of Skin	535
12.3.5.2	Dentistry Applications	536
12.3.5.3	Scaffolds for Bone Tissue Engineering	538
12.4	Biopolymers	539
